DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains: Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in combination with Hundt et al (U.S. Patent No. 5,590,462) and Cha et al (U.S. Patent No. 6,242,798).

Applicant's admitted prior art discloses in figures 12-18 and related text of the specification a method of fabricating a microelectric package comprising providing a substrate (figure 12, 204) having a first surface (figure 12, 214), and opposing second surface, and a plurality of lands (figure 12, 212) disposed on the first surface; providing a microelectronic die (figure 12, 202) having an active surface (figure 12, 208), a back surface, and a plurality of pads (figure 12, 206) disposed on the active surface in a corresponding relationship to the plurality of substrate lands; electrically attaching the plurality of substrate lands to the plurality of corresponding microelectronic die pads with a plurality of conductive bumps (figure 12, 216); disposing an underfill material (figure 13, 222) such that the underfill material is dispersed between the microelectronic die active surface and the substrate first surface wherein the underfill material is dispensed by a needle (figure 13, 230) and the underfill material comprises an epoxy material (page 3, line 6) and is cured (page 3, line 10).

Application/Control Number: 10/033,854

Art Unit: 2823

AAPA also discloses providing a second micorelectronic die (figure 17, 242) having an active surface (figure 17, 256), a back surface (figure 17, 244) and at least one wirebond pad (figure 17, 254) disposed on the active surface, attaching the second microelectronic die back surface to the microelectronic die back surface (figure 17) and attaching at least one wirebond (figure 17, 252) between the at least one substrate wirebond land (figure 17, 258) and the second microelectronic wirebond pad, wherein attaching the second microelectronic die back surface to the microelectronic die back surface comprises disposing a layer of adhesive therebetween (page 4, line 5).

AAPA fails to disclose forming a through hole extending from the substrate first surface to the substrate second surface and disposing the underfill material through the through hole.

Hundt et al discloses in figures 1-2 and related text a method of forming a through hole (figure 2, 24) extending from the substrate first surface to the substrate second surface and disposing the underfill material (figure 2, 18) through the through hole. It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the teachings of Hundt with the method of AAPA in order to more firmly bond the substrate and the microelectronic die (Abstract).

Neither AAPA nor Hundt disclose positioning the microelectronic die and the substrate such that the microelectronic die is gravitationally below the substrate. However, Cha et al discloses that epoxy can be applied from the top down through a through hole instead of injected upward (figure 5B and col. 4, lines 5-20). It would have been obvious to one of ordinary skill at the time of the invention to combine the teachings of Cha with the combined method AAPA and

Art Unit: 2823

Hundt in order to provide a reduced processing time and decreased solder fatigue (col. 2, lines 30-40)

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott A Brairton whose telephone number is (703) 605-4213. The examiner can normally be reached on M-F, 8:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wael Fahmy can be reached on (703) 308-4918. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 746-4082 for regular communications and (703) 746-4082 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
